FOREWORD

The following pages will give you a brief thumbnail sketch of **REY-TECH CONSTRUCTION & DEVELOPMENT CORPORATION**, an insight of its organizational structure, its people and their competence and involvement in restructuring the country's economy through construction activities.

THE STORY

The beginning of **REY-TECH** could be traced way back in 1994 when Mr. Hector S. Reyes together with his enterprising colleagues who worked in the Middle East for almost a decade, decided to put up locally a contracting firm using their resources-financial and technological skills.

During its first year, **REY-TECH** operated as a general service contractor on structural and electro-mechanical as its specialized field of endeavor. Backed by sufficient, competent and fully qualified ex-abroad engineers and skilled workers that consistently established the work quality and executed every job within the time required by the clients, numerous projects had been awarded to **REY-TECH**, a chance to broaden its operation.

The specialization and expansion programs proved beneficial for **REY-TECH**, which reported more than seven million pesos (Php 7,000,000.00) worth of contract in its second year and increase three times in the year followed.

In its relatively short period of existence, **REY-TECH** has manifested a steady growth and consistently dollar saving operation. This could be safely attributed to the availability of competent engineers fully complimented by more than one hundred fifty employees with an equal number of contractual workers that could be easily mobilized at a moment's notice to meet the additional manpower requirements for any complex engineering task

This company **REY-TECH**, being formed after extensive research into the local Philippine engineering, fabrication and construction needs, is offering to individual clients who wish to meet the ever growing demand for the quality required in the world market which Philippine engineering companies will most definitely play a large part in the present and future.

REY-TECH management together with their former company in abroad presently envisioning a long-range program of undertaking projects preferably in the Middle East where construction activities abound and Filipino technocrats are much in demand. However, it shall continue to maintain operations in the country and improving more of its work quality and position in the local construction industry.

Hector S. Reyes

Chief Executive Officer

KEY STAFF

TECHNICAL PERSONNEL

PROJECT MANAGER:

ENGR. RAYMUND H. DELA CRUZ
